

COMBIVAC Series

Controller

for passive sensors
in demanding industrial
and research applications

Measuring range: 1×10^{-9} - 1000 mbar

Measuring range: 1×10^{-12} - 1000 mbar

COMBIVAC Series

Monitoring and control across the entire vacuum pressure range between 10^{-12} and 1000 mbar

By combining two principles of measurement (THERMOVAC and PENNINGVAC) the COMBIVAC CM 51 performs vacuum pressure measurements and control within the entire range of 10^{-9} and 1000 mbar.

The COMBIVAC 52 covers the entire range of vacuum pressures from 10^{-12} to 1000 mbar by combining two UHV principles of measurement (THERMOVAC and IONIVAC).

Customer Benefits

- Compact three channel measuring instruments for passive sensors
- Vacuum pressure measurement from 10^{-12} - 1000 mbar
- Automatic switchover and high voltage control from THERMOVAC to PENNING (CM 51), and from THERMOVAC to IONIVAC (CM 52)
- Connection of adjusted, temperature compensated THERMOVAC sensors
- Connection of compact, bakeable and rugged PENNING, resp. IONIVAC vacuum gauge heads
- High sensor reliability and lifetime
- Cost-effective replacement sensors and electrodes
- Error message per channel, in case of a broken filament, defective sensor line or failed plasma discharge, for example
- Compact, installable benchtop housing (1/4 19-in., 3 HU) on request
- Cable length up to 100 meters possible
- RS 232/485 and Profibus interfaces
